In the Specification:

The paragraph beginning on page 16, line 3 has been amended as follows:

As previously discussed, it is also with the scope of the present invention that a wound electrode assembly for a casing having radiused sidewalls can have a case-positive design. This cell design is shown with respect to Figs. 8 to 10. These drawings illustrate a "galaxy wound" electrode assembly 100 comprising an anode electrode 102 and a cathode electrode 120. The anode electrode comprises five face portions designed designated 104, 106, 108, 110 and 112 joined by connecting portions 114A, 114B, 114C and 114D. The cathode electrode 120 is in two pieces or sections. The first comprises face portions 122, 124 and 126 joined by connecting portions 128A and 128B. The second cathode section comprises face portions 130, 132 and 134 joined by connecting portions 136A and 136B.
